This widely popular text introduces the diagnostic assessment, using the DSM-IV-TR™ with its obvious strengths as well as its limitations. This book is designed to support the practitioner toward the concept and current application principles relating psychopathology to clinical mental health practice. In addition, the application chapters of the book seek to extend beyond the traditional diagnostic assessment supporting efforts to enhance behaviorally-based biopsychosocial practice strategy.

This book brings the DSM-IV-TR™ to life, integrating case studies throughout the book that apply principles from the DSM-IV-TR™. It provides an overview to assessment, diagnosis, and treatment planning using the DSM-IV-TR™.
